

UnitedHealthcare Pharmacy
Clinical Pharmacy Programs

Program Number	2018 P 3095-2
Program	Step Therapy
Medication	Emflaza™ (deflazacort)
P&T Approval Date	5/2017, 10/2018
Effective Date	2/1/2019; Oxford only: N/A

1. Background:

Emflaza™ (deflazacort) is a corticosteroid indicated for the treatment of Duchenne muscular dystrophy (DMD) in patients 5 years of age and older.¹

In a recent report from Guideline Development Subcommittee of the American Academy of Neurology, in regard to selection of prednisone versus deflazacort in the treatment of DMD, the following statement is made: “prednisone and deflazacort are possibly equally effective for improving motor function in patients with DMD (2 Class III studies). There is insufficient evidence to directly compare the effectiveness of prednisone vs deflazacort in cardiac function in patients with DMD (1 Class III study of a combined cohort).² The UnitedHealthcare Pharmacy and Therapeutics committee has determined that Emflaza is Therapeutically Equivalent to prednisone in the treatment of DMD.

Step Therapy programs are utilized to encourage the use of lower cost alternatives for certain therapeutic classes. This program requires a member to try prednisone or prednisolone prior to receiving coverage for Emflaza.

2. Coverage Criteria^a:

A. Emflaza will be approved based on **both** of the following criteria:

1. Diagnosis of Duchenne muscular dystrophy

-AND-

2. Patient has a history of failure, contraindication, or intolerance to prednisone or prednisolone

Authorization will be issued for 12 months

^a State mandates may apply. Any federal regulatory requirements and the member specific benefit plan coverage may also impact coverage criteria. Other policies and utilization management programs may apply.

3. Additional Clinical Rules:

- Supply limits, Medical Necessity and/or Notification may apply
